## Heat, Heat, Who's Got the Heat?

30 Points Possible

Name $\qquad$

Background: In class, we have been investigating energy transfers involving our everyday lives and the Earth. This project is designed to give you the opportunity to demonstrate your knowledge of the 3 methods of thermal (heat) energy transfer.

## Instructions:

1) Cover page: Draw the name in color of each type of heat transfer (radiation, conduction, and convection in this order) on each flap. (3 points)
2) Definitions: Provide a definition from your textbook for each type of heat transfer, using complete sentences. Put this on the back of the cover flap. (6 points)
3) Examples: Draw two colored and labeled examples for each type of heat energy transfer. One example of each should be from your life experiences and one must be from nature (not involving man-made things). Include at least one sentence per example describing how the heat is transferred (from where to where). (12 points)
4) Back: Write name, date, and period on the back. Also tape the rubric to the back. (5 point)
5) Foldable is on time, neat, shows effort, has minimal spelling/grammar errors, and all requirements are in the appropriate place. (4 points)

## Outside/Cover page

Inside

| Definition of Radiation | Every Day Example <br> Sentence <br> describing how heat <br> is transferred. | Natural Example <br> Sentence <br> describing how <br> heat is transferred. |
| :--- | :--- | :--- |
| Definition of Conduction | Every Day Example <br> Sentence <br> describing how heat <br> is transferred. | Natural Example <br> Sentence <br> describing how <br> heat is transferred. |
| Definition of Convection | Every Day Example <br> Sentence <br> describing how heat <br> is transferred. | Natural Example <br> Sentence <br> describing how <br> heat is transferred. |

## Rubric:

| Name, Date, and Period: |  |
| :--- | :--- |
| Items in the foldable | Points |
| Cover page: Draw the name <br> in color of each type of heat <br> transfer (radiation, <br> conduction, and convection) <br> on each flap. |  |
| Definitions: Provide a <br> definition of each type of heat <br> transfer, using complete <br> sentences. | /3 |
| Everyday Examples: Draw <br> colored and labeled <br> examples (examples from <br> your life/experiences and <br> from nature) for each type of <br> heat energy transfer. Include <br> at least one sentence per <br> example describing how the <br> heat is transferred. | /6 |
